

SYSTEM VULNERABILITY AUDIT — REPORT

Project 4: System Vulnerability Checklist — DecodeLabs Cyber Security Training

Auditor Name: Muhammad Abd Ur Rehman

Date: 13 July 2026

Device: Personal Windows PC

Operating System: Windows 11

SECTION 1 — FLAWS FOUND (The Diagnosis)

Audit was performed using native PowerShell and Control Panel utilities across all four checklist steps. Three findings were identified and are ranked below using CVSS 4.0.

#	Vulnerability / Finding	CVSS	Risk Level	Checklist Step
1	Local password policy has no minimum password length (0 characters) and no password history enforcement (net accounts). Violates NIST 800-63B guidance on password strength.	7.5 (High)	High	Step 1 - Identity
2	Screen lock timeout not configured; ScreenSaveTimeOut and ScreenSaverIsSecure registry values are unset, so an unattended, unlocked session is possible.	5.3 (Medium)	Medium	Step 3 - Human Perimeter
3	System is not fully current - 2026-06 Preview Update (KB5095093) is available but not installed.	3.1 (Low)	Low	Step 2 - Patch Mgmt

SECTION 2 — REMEDIATION ACTIONS (The Treatment)

Finding 1 (Password Policy): Run 'net accounts /minpwlen:12' and 'net accounts /uniquepw:5' (as Administrator) to raise the minimum password length and enforce password history, bringing the local policy closer to NIST 800-63B guidance.

Finding 2 (Screen Lock): Go to Settings > Personalization > Lock Screen > Screen Saver Settings. Set a screen saver with a wait time of 10 minutes and check 'On resume, display logon screen.'

Finding 3 (Pending Update): Go to Settings > Windows Update > Download & install to apply KB5095093, then click Check for updates again to confirm the system reports up to date.

SECTION 3 — HARDENED VERIFICATION (The Proof)

Confirmed at time of audit (no action needed):

```
[OK] Firewall – Domain/Private/Public profiles: State ON, Policy BlockInbound,AllowOutbound
[OK] BitLocker – Local Disk (C:) BitLocker on; Personal (D:) BitLocker on
[OK] Guest account – Get-LocalUser Guest: Enabled = False
[OK] Admin group – net localgroup administrators: 4proo, Administrator only (no privilege creep)
```

Confirmed after remediation:

```
[OK] Password policy – net accounts: Minimum password length = 12, Password history = 5
[OK] Screen lock – ScreenSaveActive = 1, ScreenSaveTimeOut = 600, ScreenSaverIsSecure = 1
[OK] Windows Update – "You're up to date", Last checked: Today, 1:10 PM; KB5095093 installed, no pending updates
```
